

EZ Tee

EZ Tee 200 is a broadloom tufted nylon with a pile height of 2" and a pile weight of 110oz./ sq. yard. The primary backing is a stabilized woven polypropylene and the secondary backing is a 20 oz. urethane. The turf can be used for Tee Line and Hitting Mats. 1 Year Warranty. Roll sizes are 12' x 50' (average) and the mats can be ordered in 6' x 6'.

(Custom sizes are available)
6' x 6' Mat \$399.00

E Z Tee-Line Installation Instructions

EZ Tee can be installed over any solid subsurface. The turf does not requiring an infill, however some of your customers may ask if it is possible to tighten the fibers. You can use any type of silica sand or ceramic micro spheres for an infill. The fibers are very tight and the infill process is difficult. We would recommend that you have two people doing the infill. One person opening the fibers by dragging a 2" x 4" or the back of a concrete rake over the turf, with the other person dropping in the sand with a shovel. You will only be able to infill the turf small sections at a time.

E Z Tee Mats require periodic rotation and cleaning consistent with the level of use.

Concrete

- When it is installed over concrete you may lay the turf directly over the concrete with out an adhesive.
- For a permanent installation adhere it with an indoor-outdoor carpet adhesive.

Grass or Screenings

- The turf may lay directly over the sub base for a temporary installation.
- If the turf is a permanent installation then you need to use landscape staples every 1' around the perimeter of the turf.
